

VertiRack™

SUPERIOR DESIGN FOR ULTIMATE CONVENIENCE

VertiRack™ Roof Mount Ladder Racks

VertiRack™ Roof Mount Ladder Racks are the only ladder racks specifically designed and custom sized to fit your box truck, enclosed service body or enclosed trailer. Unlike "one size fits all" ladder racks, or van and pick up ladder racks adapted for truck mounting, **VertiRack™ Roof Mount Ladder Racks** have been designed to properly mount to the structural sections of the body as well as evenly distribute the ladder rack's load.

VertiRack™ ladder racks are manufactured from industrial grade, internally reinforced, anodized aluminum extrusions. These structural extrusions are comparable in strength to 1 1/2" square 1/8" wall welded steel tubing at 2/3's the weight. In addition **VertiRack™** uses all high grade, stainless steel exposed fasteners.

Anodizing the aluminum means no oxidation or blackening of the aluminum portions of the ladder rack frame, stainless steel fasteners keep your vehicle free from unsightly rust streaks down its side; all this allows your vehicle to retain it's attractive, professional appearance for years to come.

Each ladder rack frame is equipped with an industrial grade, solid, UHMW-PE ladder guard cross member insert. This eases loading and unloading of your ladders and eliminates dangerous ladder wear; also keeping damage to the ladder rack cross member to a minimum.

VertiRack™ quarter inch thick mounting plate and bracket options offer extreme mounting flexibility to accommodate any roof style.
